It is simple in go through preferable to comprehend. It is full of wisdom and knowledge It is extremely difficult to leave it before concluding, once you begin to read the book.

This item is printed on demand - Print on Demand Neuware - DNA methylation carried out by DNA methyltransferases (MTases) is widespread in prokaryotes and eukaryotes. We have changed the target specificity of EcoDam from GATC to GATT by directed evolution, combining different random mutagenesis methods with restriction protection at GATT sites for selection and screening. After four generations of mutagenesis and selection, we obtained enzyme variants with new specificity for GATT. We conclude that the new methyltransferases are fully functional in vivo and in vitro. The EcoDam and T4Dam DNA-(adenine N6)- methyltransferases both methylate the adenine residue in GATC sites. They are highly related in amino acid sequence and structure but deviate in their contact to the first base pair of the target sequence. We have transplanted the T4Dam DNA recognition module into EcoDam and show that the EcoDam K9A/Y138R double mutant is highly active and specific. This result indicates that there exists a smooth evolutionary pathway changing the EcoDam DNA recognition mode to the T4Dam mode without loss of activity. 100 pp. Englisch.
